Projects

Friendly

Friendly is a cutting-edge application that reimagines traditional letter exchange in a modern context. Utilizing React Native for the frontend, Node.js for the backend, and MongoDB for data storage, it incorporates a unique dynamic waiting time feature, adjusting delivery anticipation based on distance. Integrated geolocation enhances precision in calculating distances between users. The platform also allows users to personalize profiles, adding a photo and specifying languages spoken and topics of interest. Check out the [demonstration video](#) of Friendly's features...

Airbnb clone

I successfully developed a replica of the Airbnb website, showcasing my proficiency in React and Node.js. This project exemplifies my skills in creating dynamic and responsive web applications.
